

Testamently

The half *they'll need.*

A private, encrypted vault for the codes, locations and last words that unlock what you leave behind — released to the people you trust, only if your check-ins ever stop.

What it is

Not a password manager, and not a legal will. Testamently holds the things that would otherwise be lost — the PIN to the phone with the family photos, a life-insurance policy no one knows about, where the safe is, a letter to your children. On its own it opens nothing: the other half — the phone, the wallet, the safe — lives with you, so a breach reveals nothing usable.

We keep the code

The PIN, the safe combo, where things are kept — encrypted, released only on your terms.

Your home keeps the thing

The phone, the wallet, the safe itself — never uploaded, never ours to lose.

Access, at the right time

Only your trustees, only once both halves meet — and only after you're gone.

A few things people keep here

Access

- Phone PIN — for the photos
- Crypto wallet PIN & recovery
- Home-safe combination

They'd never find

- A life-insurance policy
- An account abroad
- Where the will & solicitor are

Irreplaceable

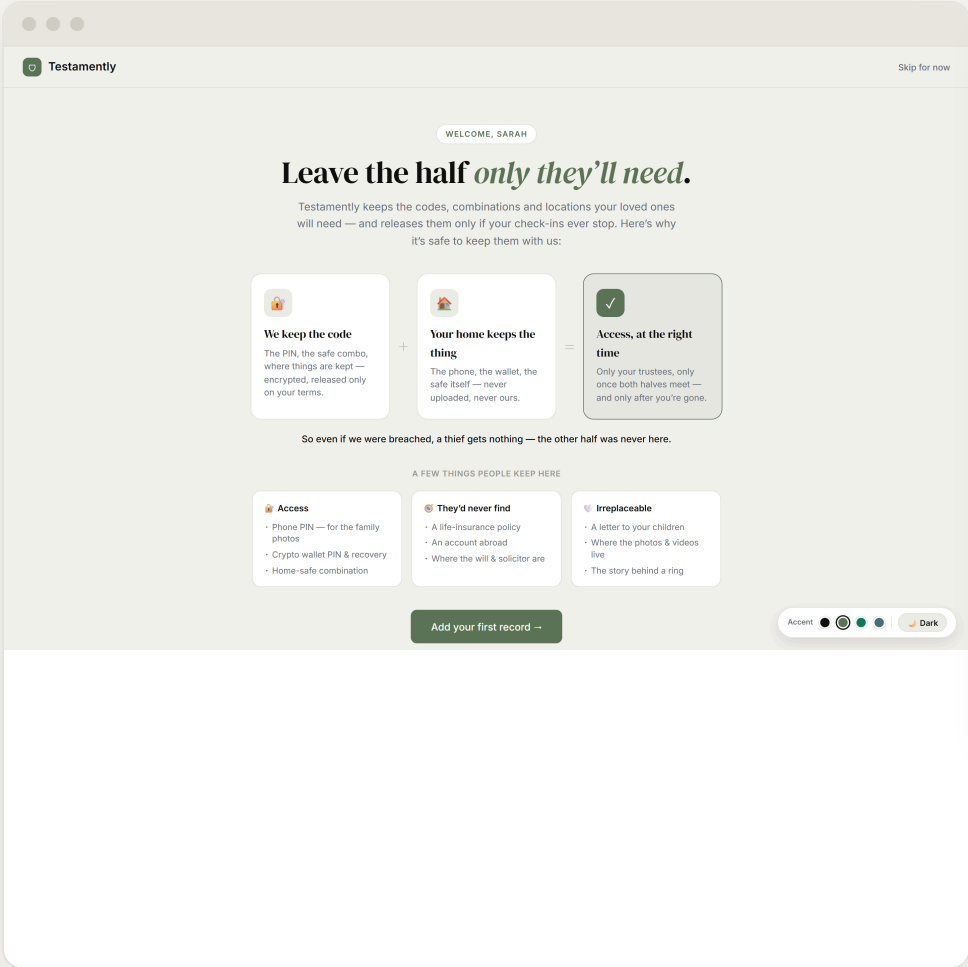

- A letter to your children
- Where the photos & videos live
- The story behind a ring

Legal notice. Testamently is a private, encrypted information vault — not a legal will, trust or estate-administration service, and not a substitute for one. Release to trustees is a convenience, not probate. It can hold a copy of your official will, or point your family to the solicitor who keeps the original.

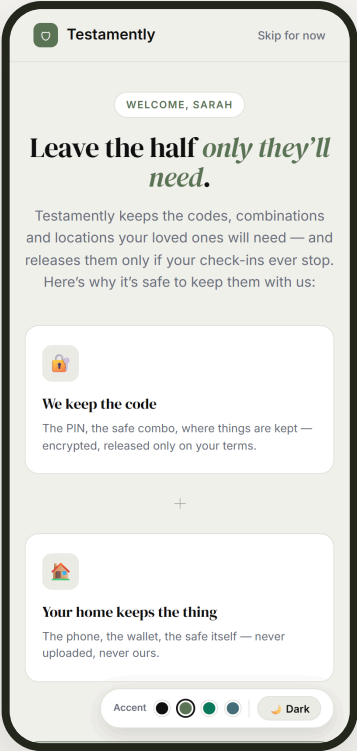

01 Welcome / onboarding

The “you hold half” explainer, an example bank, then add your first record.

04 Add a record • Step 1

Physical-half types, quick-pick + name + secret, the “we hold one half” note.

DESKTOP

The desktop view shows a modal window titled "Add a record" with a close button (X) in the top right. The modal has a progress bar at the top with two steps: "1 The record" (active) and "2 Who receives it". Below the title, a subtitle asks: "What does someone need to find or open something physical you're leaving behind?". A section titled "What is it?" contains several button options: "Phone / device" (selected), "Crypto wallet", "Safe combo", "Keys & access", "Document", "Letter", and "Photo". Below these are two text input fields with placeholder text: "e.g. iPhone passcode" and "e.g. the 6-digit code — the phone itself stays with you". A green callout box contains the text: "Store the PIN, not the phone — the code, not the wallet. We keep one half; your home keeps the other, so a breach of Testamently alone reveals nothing usable." Below this is a section for "Standard encryption" with a warning icon and text: "Standard encryption, released only if your check-ins stop — editable later. Want to change it now?". A dropdown menu is set to "Advanced — encryption & release rule". At the bottom, a status bar shows "Encrypted before saving.", "Cancel", and a "Continue →" button. A system tray at the bottom right contains "Accent" and "Dark" mode toggles.

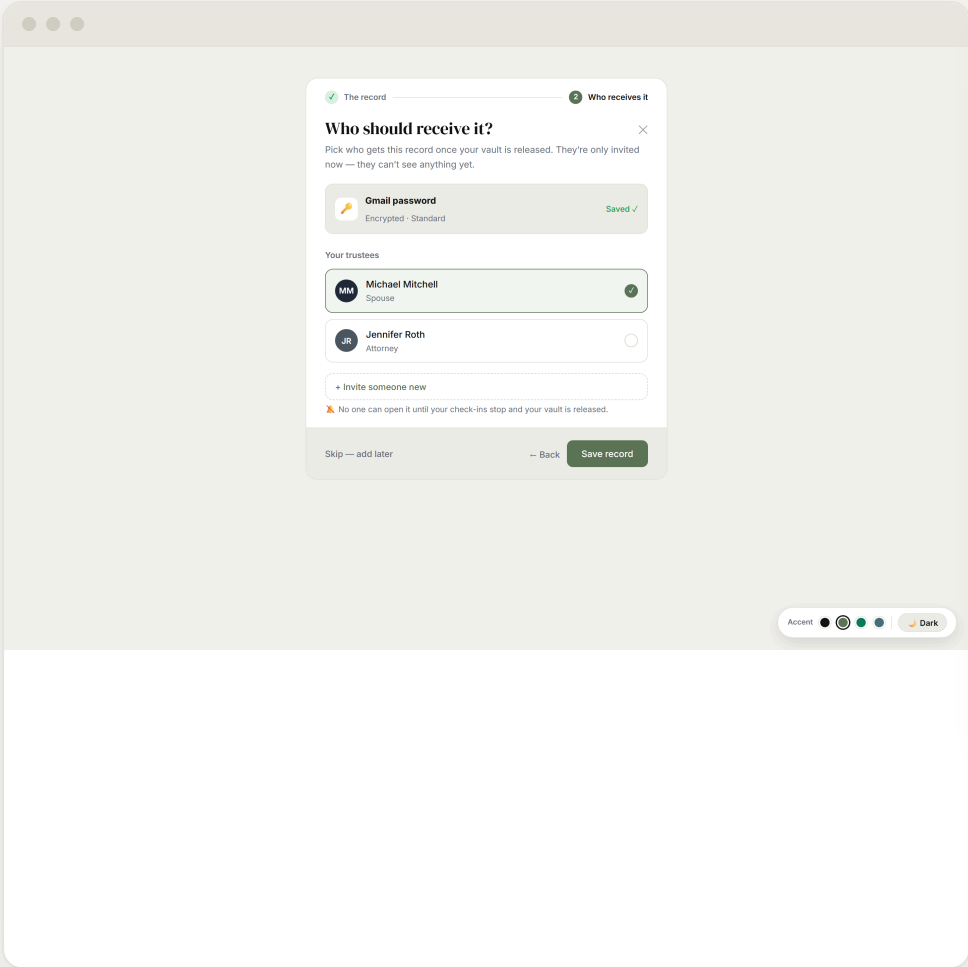

MOBILE

The mobile view shows the same "Add a record" form adapted for a smaller screen. The progress bar and title are at the top. The "What is it?" section has buttons for "Phone / device" (selected), "Crypto wallet", "Safe combo", "Keys & access", "Document", "Letter", and "Photo". The text input fields and callout box are present. The "Standard encryption" section is also visible. The bottom status bar includes "Encrypted before saving.", "Cancel", and "Continue" buttons. A system tray at the bottom right contains "Accent" and "Dark" mode toggles.

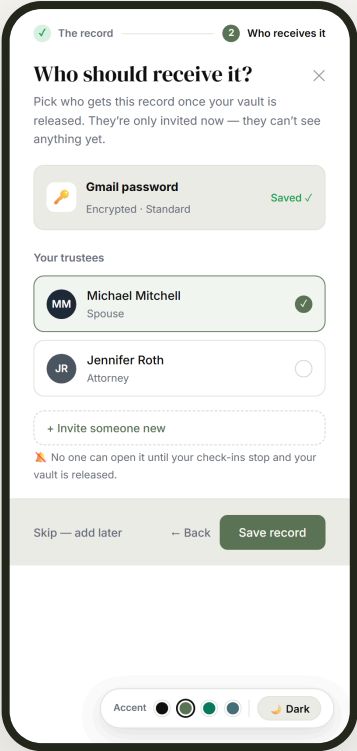

05 Add a record • Step 2

“Who should receive it?” — pick a trustee (or skip and add later).

DESKTOP

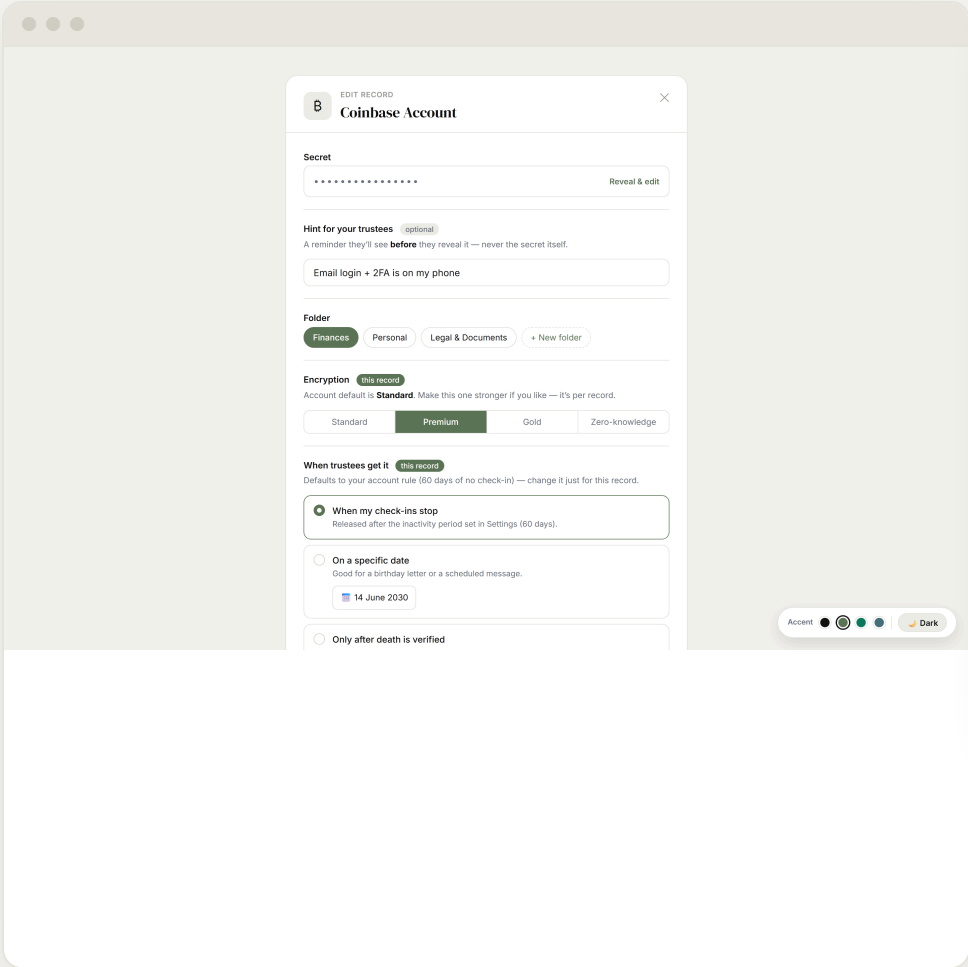

MOBILE

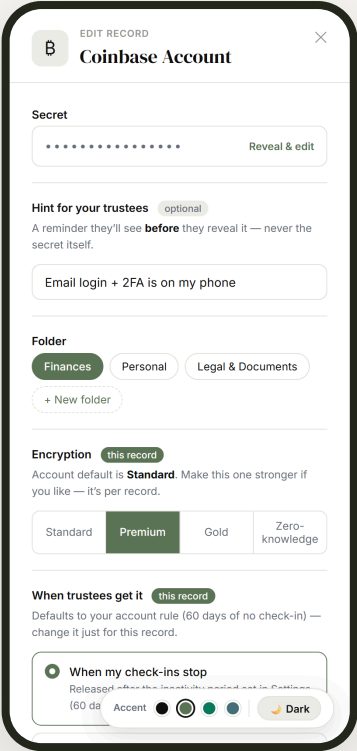

06 Edit a record

Rename, hint, folder, encryption, release rule, swap trustees, or delete.

DESKTOP
